Ontario, Canada

SUMMARY

Seasoned Software Engineer with 7+ years of experience building scalable data platforms and distributed systems across SaaS and fintech. Strong focus on multi-tenant architectures, event-driven systems, and high-volume data pipelines. Proven ability to lead projects from design to production and deliver systems that improve performance, reliability, and data access.

SKILLS

Languages	Python, TypeScript, JavaScript, Rust
Backend	Node.js, Express, FastAPI, GraphQL, REST
Frontend	React, Next.js, Tailwind CSS
Data Engineering	DBT, Snowflake, Airbyte, Azure Databricks, Azure Data Factory
AI / ML	LangChain, OpenAI, Claude, RAG, Vector Search, TensorFlow
Databases	PostgreSQL, MongoDB, MySQL, Firestore
Cloud	AWS (Lambda, SQS, S3, SAM), GCP, Azure
DevOps	Docker, Terraform, GitHub Actions, Jenkins, AWS SAM
Practices	System Design, Distributed Systems, Multi-tenant Architecture, Agile

EXPERIENCE

Senior Software Developer, Insights & Data Platform ThinkLP	Sept 2024 – Present <i>Remote</i>
---	--------------------------------------

- Built a multi-tenant data platform using DBT, Snowflake, Airbyte, and Python, reducing data processing latency by 60% and enabling scalable onboarding of enterprise retail clients across North America and Europe
- Engineered a high-throughput XML ingestion system processing 1M+ records, eliminating failures in the legacy importer and enabling onboarding of a major European client
- Developed a configurable SFTP ingestion framework supporting multiple file formats and schema mapping, enabling zero-code onboarding of new data sources and reducing manual ingestion effort
- Integrated Salesforce location data into Snowflake via Airbyte, eliminating manual reconciliation workflows and standardizing reporting data across teams
- Implemented row-level security in Snowflake using role-based access for tenant isolation and built a permission sync pipeline using SQS, Lambda, and AWS SAM, replacing a fully manual access control process
- Built a customer-facing insights platform using Next.js with JWT-authenticated Sigma dashboards, a transaction explorer powered by a composable query builder, and an event-driven alerting system, reducing time-to-insight from days to minutes
- Led architecture and execution across data and insights systems, owning delivery end-to-end and ensuring system reliability and scalability

Senior Software Developer Arctic AI	Feb 2022 – Nov 2024 <i>Remote</i>
---	--------------------------------------

- Built an enterprise data platform on Azure (Databricks, Data Factory, Data Lake), reducing operational costs by 40% and enabling scalable analytics across multiple client products
- Developed RAG-based AI systems using LangChain and LLMs, improving retrieval accuracy by 25% across production workflows

- Implemented vector search infrastructure for semantic retrieval, improving response quality and reducing token usage
- Scaled data pipelines using Azure Databricks to support multi-source ingestion and advanced analytics, improving efficiency by 20%
- Led a full platform redesign using Next.js, increasing web traffic by 40% and improving user engagement
- Implemented CI/CD pipelines with GitHub Actions and Docker, improving deployment reliability and speed by 30%
- Reduced production defects by 20% through structured testing and engineering standards
- Built a financial data processing tool on GCP that reduced manual workflows by over 60%
- Mentored engineers and contributed to system design and technical direction across projects

Web Application Developer

Aug 2021 – Oct 2021

Divergence Neuro

Remote

- Collaborated with the backend team to develop a client-facing web application using React JS and AWS, integrating API endpoints to deliver a seamless user experience
- Implemented Progressive Web App (PWA) compliance and integrated service workers to ensure the application's robustness and offline capabilities
- Developed a customized solution to integrate QR scanner and Bluetooth functionality using React JS, enabling seamless connection to Neurosity devices for users

Software Developer

Jun 2021 – Aug 2021

Neo Financial

Remote

- Developed a system for designing and generating credit statements for printing at Symcor, using Node, React, AWS, Terraform, Typescript, GraphQL, MongoDB, and Jest
- Optimized the bank micro-service to provide a smooth and efficient payment gateway experience via MasterCard integration to reduce latency and declining transactions
- Increased transaction processing efficiency by 15% by engineering the decider microservice to send declined transactions to a third-party API (Fraud Net) and effectively store responses using Node, AWS, Typescript, Terraform, MongoDB, and Jest

Data Scientist (M.Eng Research)

Sept 2019 – Dec 2020

University of Waterloo

Waterloo, ON

- Built image classification models using transfer learning (Inception-ResNet-V2, EfficientNet), achieving up to 92.18% accuracy across 120 classes
- Improved pedestrian detection performance by over 20% by re-annotating datasets and training Faster R-CNN models with optimized data pipelines

Software Developer

Jan 2018 – Jul 2019

Finklassic

Lagos, NGA

- Increased company revenue by 30% by developing an algorithm for optimized text message dispatch to targeted audiences
- Implemented robust documentation and testing procedures, including unit and integrated test cases, to ensure high product quality across all projects
- Designed a survey administrator tool for accurate user feedback retrieval and tracking

EDUCATION

M.Eng, Electrical and Computer Engineering (Distinction), University of Waterloo Sept 2019 – Dec 2020

B.Eng, Electrical and Electronics Engineering (First Class), Federal University Oye Feb 2013 – Jan 2018
